

Clean swept in no time.

Rear attachment

Attaching sweeper suitable for various carrying vehicles.

Front attachment

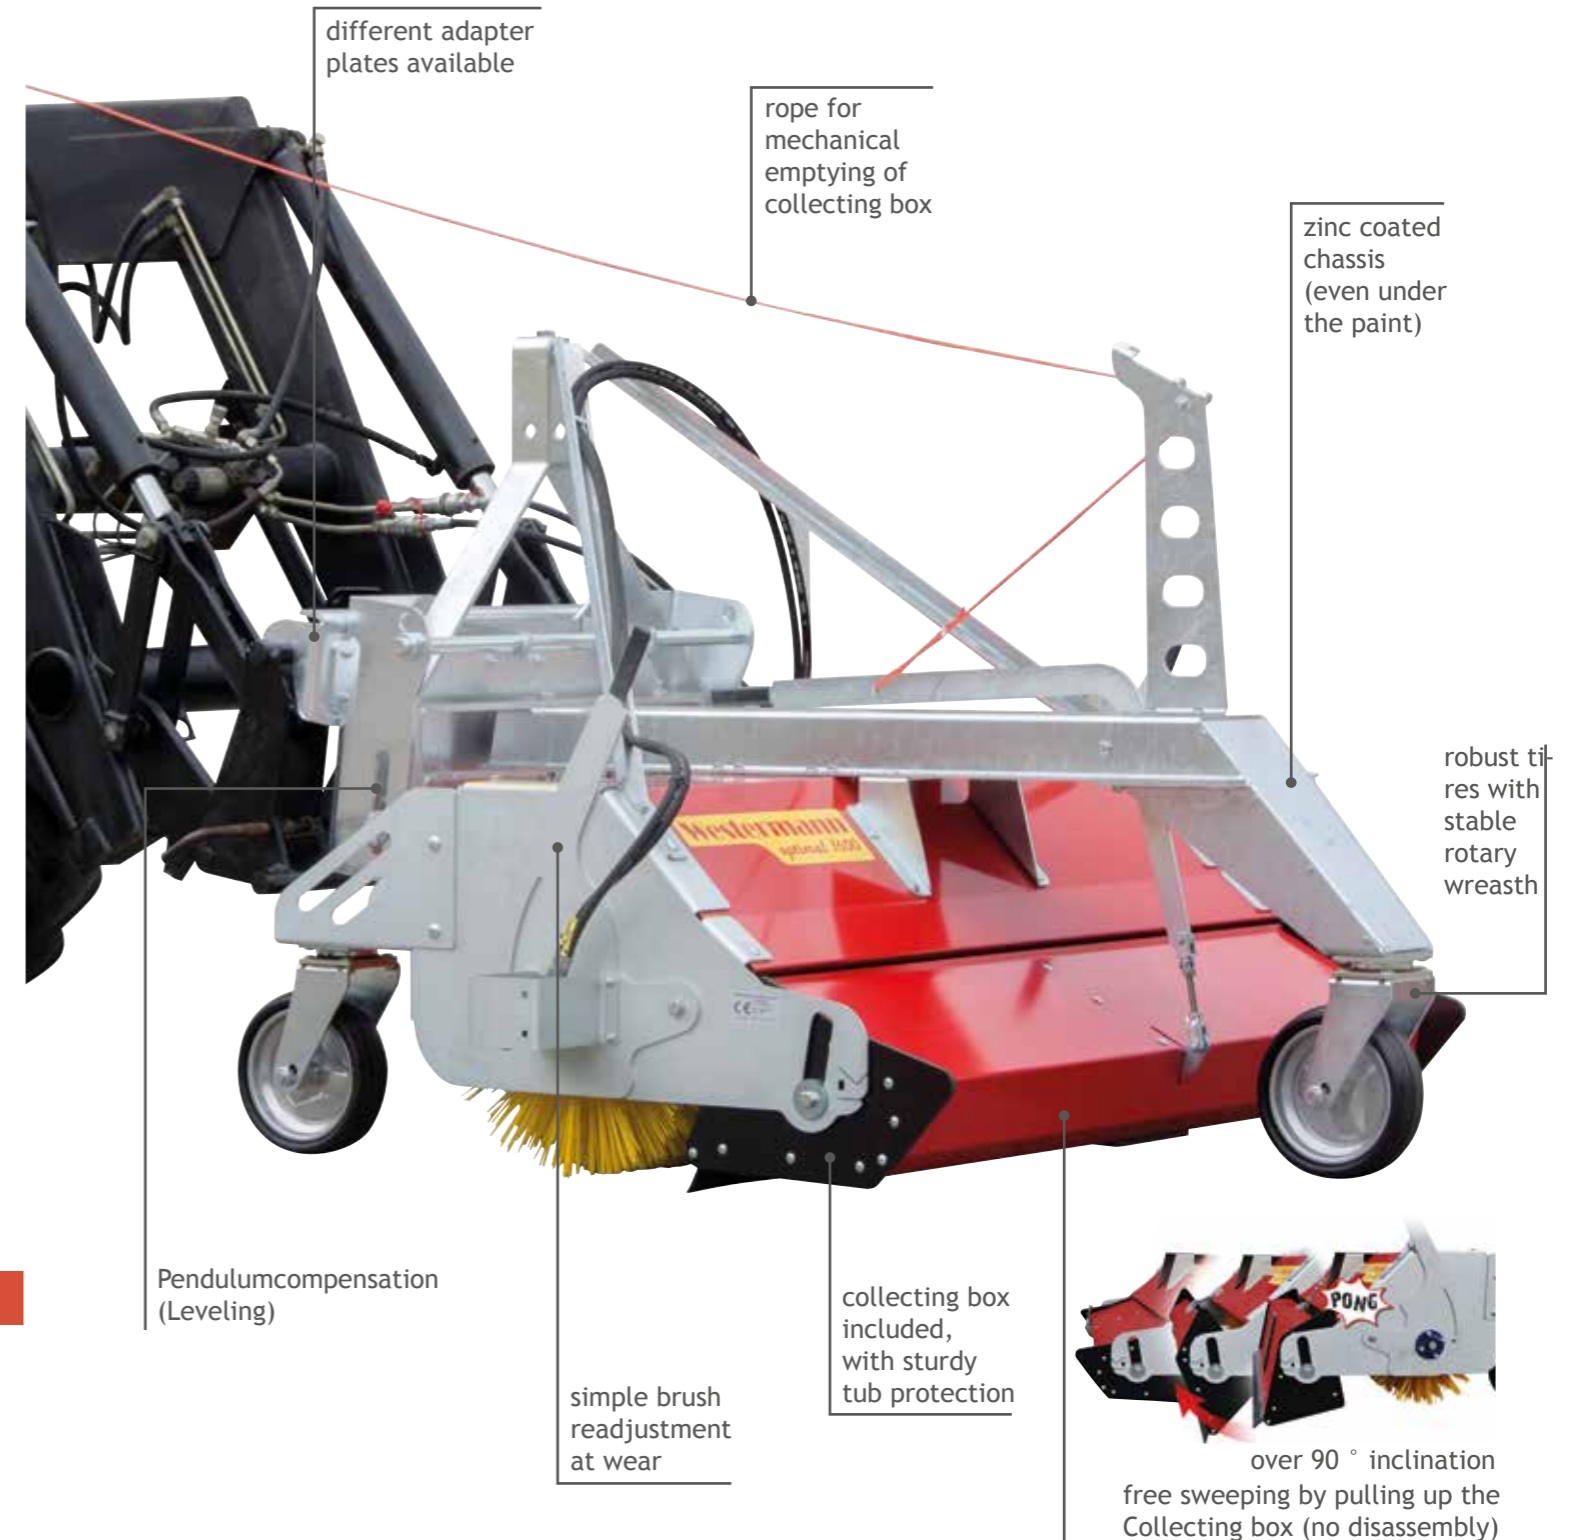

An additional optionally available side brush ensures cleanliness right up to the edges.

With a deflection angle of more than 90° the standard collecting box becomes completely emptied without residues.

The high maneuverability of the sweeper allows safe maneuvering even near the wall.

Technical data

	Optimal 1600
Working width	1600 mm
Brush diameter	520 mm
Depth of the collection box	360 mm
Emptying of collecting box	mechanically, hydraulically possible (surcharge)
Swiveling	mechanically, hydraulically possible (surcharge)
drive	Gerotormotor
Wheels	2 with rear attachment, 3 with front attachment
Flow rate	20 - 50 l / min.
Recommended speed	approx. 200 l / min.
Max. Operating pressure	180 bar
Weight	approx. 280 kg
Mounting options	via adapter plates as rear or front attachment to various carrier vehicles

(Technical data is approximate and non-binding.)

HIGHLIGHT

The system for emptying the collecting box convinced: With a deflection angle of more than 90°, the entire debris falls out of the tub, residues do not remain. So again there is enough space for the debris of the next use.
